Self-Esteem

Rejuvenate Your Smile with Cosmetic Dentistry

Improving the beauty of your smile can be as simple as re-contouring of one or more teeth or as comprehensive as an aesthetic and functional rehabilitation. Cosmetic Dentistry can brighten dull teeth, whiten stained teeth, close gaps between teeth, repair chipped teeth, mask metal fillings, and straighten crooked teeth.

New technologies have made a beautiful smile more affordable and more attainable than ever before. Hollywood smiles are no longer limited to Hollywood Stars. A pleasing smile that appears balanced and natural involves a lot more than just treating the teeth. At smile essentials your smile is essential!™

Visit our clinic for a consultation and let one of our cosmetic dentists teach you more. We believe a smile is as important to a positive self image as health, fitness or education.

Dental Implants: The Freedom You Deserve

Dental implants are today's best alternative to natural teeth. They can be your doorway to renewed self-confidence and peace of mind.

An implant is, essentially, a sophisticated titanium screw which is placed into the jaw bone to replace the root of a lost natural tooth. The implant fuses with the jaw bone to form a secure foundation for tooth replacement. The end result... replacement teeth that look, feel and function just like natural teeth. The embarrassment, irritation and self-consciousness often experienced by people who have missing teeth, those who wear dentures or who have suffered through older methods of tooth replacement are overcome with the confidence of permanently anchored dental implants.

Dental implants are now recognized as routine treatment for a full range of problems from replacing a single tooth, to full oral rehabilitation, or simply for reliable denture retention.
